PT Total Bangun Persada (TOTL IJ / TOTL.JK) — The Questions That Decide the Investment

Research memo · 13 August 2026 · analysis, not investment advice

0. What you are actually buying

TOTL is an asset-light, debt-free, ~90%-payout building contractor with almost no free float, whose traditional end markets are in a documented downturn and whose entire recent profit growth sits in an equity-accounted joint-venture line. It is not a construction company in the way the Indonesian state contractors (WIKA, PTPP, ADHI, WSKT) are: it employs roughly 496 people against Rp3.90tn of revenue, budgets Rp10bn of capex for 2026, carries zero interest-bearing debt and Rp1.09tn of cash, and takes essentially no government work. It is a construction manager that wins private high-rise, hotel, hospital, industrial and — now — data-centre jobs, subcontracts the execution, and returns nearly all the profit as dividends. The family holding company owns 56.5%, Japan's Shimizu owns 19.9% after a 2024 tender offer at Rp580, and after two more large individual holders the genuinely tradeable float is around 11%. Any view on the stock is a view on two things: whether the data-centre pivot is large and durable enough to replace the collapsing Jakarta office/apartment market, and whether the joint-venture income that produced 96% of the last half-year's profit growth is a franchise or a one-off.

Segment / driver	FY2025 revenue	Share	What it is
Construction services	Rp3.88tn	99.6%	Private-sector buildings: data centres, hospitals, hotels, offices, high-rise residential, schools, industrial. Essentially no government work
Rental and other	~Rp0.02tn	0.4%	Residual; includes the legacy property subsidiary
Largest customer — PT STT GDC Indonesia	Rp654.2bn	16.8%	Subsidiary of Singapore's ST Telemedia Global Data Centres. Up ~30x YoY. Building out the STT Jakarta campus: 9 data centres, 360MW when complete
PT Pembangunan Property Nusantara	Rp218.5bn	5.6%	
PT Batamindo Investasi Cakrawala	Rp86.4bn	2.2%	Manager of Batamindo Industrial Park

Trailing financials — through the last cycle peak (2018) and out the other side

	2018	2019	2020	2021	2022	2023	2024	2025	1H 2026
Revenue (Rp tn)	2.78	2.47 (−15.1%)	2.293	1.745	2.28	~2.9–3.1 (n/v)	3.08	3.90 (+26.4%)	2.06 (+22.8%)
Net profit to parent (Rp bn)	208.7	175.7 (−15.8%)	108.9	101.7 (−6.4%)	91.7	172.7	265.4	414.3 (+56.1%)	269.8 (+54.6%)

FY2023 revenue could not be verified from a primary source — 9M2023 was Rp2.07tn and one aggregator shows Rp3.09tn for the year, which is plausible on TOTL's heavy Q4 skew but is also exactly the FY2024 figure, so treat it as unconfirmed. Every other cell is corroborated by at least two independent reports of the filings.

Market: ~Rp1,155 most recent quote; Rp1,330 on 7 August 2026 (+9.47% that day); Rp1,240 on 8 May 2026. Share count 3,410,000,000 (derived three ways: Shimizu's 678.59m = 19.90%; Rp375.1bn dividend ÷ Rp110; Rp414.3bn ÷ Rp121.50 EPS — all agree). Market cap therefore Rp3.94tn at Rp1,155 and Rp4.53tn at Rp1,330. Cash Rp1.09tn at Dec-2025 (one source says Rp1.3tn at Mar-2026) against zero interest-bearing debt. On LTM net profit of Rp509.6bn (FY2025 Rp414.3bn − 1H25 Rp174.5bn + 1H26 Rp269.8bn): ~7.7x earnings, or 5.2–5.6x on enterprise value if you treat all the cash as excess — which Q4 argues you should not. ~3.0x book on Dec-2025 equity of Rp1.33tn, against an FY2025 ROE of ~33%. Dividend yield on the Rp110 just paid: 9.5%. There is no usable sell-side consensus — coverage is negligible and the two "targets" in circulation (Rp1,800 and Rp900) come from retail aggregators and are unverifiable.

Control: PT Total Inti Persada 56.50% (the Komajaya family holding company); Shimizu Corporation 19.90%, bought via voluntary tender offer at Rp580/share for Rp393.58bn, 26 Aug – 24 Sep 2024; Djadjang

Tanuwidjaja 10.88% as of 13 Aug 2025, up from 8.81% — an individual who has been adding; Pinarto Sutanto 1.83%, who also sits on the board of commissioners. Low Tuck Kwong (Bayan Resources) has been in the top-20 register for a decade. That leaves a genuine public float of roughly 11% — about Rp430bn (~US$26m) of actually tradeable stock.

Guidance: management targets FY2026 revenue Rp3.8–3.9tn, net profit Rp350–400bn, new contracts Rp4–5tn (the two figures in each pair come from different briefings and have not been reconciled publicly). Note what that means: management is guiding 2026 profit below FY2025's Rp414.3bn — and 1H2026 alone already delivered Rp269.8bn.

> The single fact that frames everything: 1H2026 net profit rose Rp95.3bn (Rp174.5bn → Rp269.8bn, +54.6%). Over the same half, profit from joint-venture projects rose Rp91.6bn (Rp10.01bn → Rp101.59bn, +914.9%). That is 96% of the entire profit increase sitting in one equity-accounted line. Strip it out and net profit went from Rp164.5bn to Rp168.2bn — up 2.3% — on revenue up 22.8%. In Q1 2026 the effect was starker still: revenue fell 1.1%, JV profit went from Rp2.0bn to Rp62.9bn, and net profit rose 37.4%. The consolidated construction business, on the face of the disclosed numbers, has grown its bottom line by almost nothing for eighteen months.

---

1. The five questions that decide the outcome

Q1. Is the profit growth the construction business, or the joint-venture line?

This outranks everything, because it decides whether you are looking at a company earning Rp510bn or a company earning Rp340bn with a good year in an associate.

TOTL's income statement carries an unusual subtotal. Q1 2026 coverage quotes "laba kotor setelah laba proyek ventura bersama" — gross profit after joint-venture project profit — of Rp215.68bn, of which Rp62.88bn was the JV line. So the P&L runs: revenue less cost of revenue = gross profit; plus joint-venture project profit; = gross profit after JV profit. There are two gross profit lines, and secondary coverage does not consistently say which one it is quoting.

That ambiguity has to be resolved before any margin work is trustworthy:

- If 1H2026's reported Rp364.63bn is the after-JV subtotal, core gross profit was Rp263.0bn = 12.8% of revenue, and Q2 core gross margin collapses to 9.0% from Q1's 18.2%.
- If it is the before-JV gross profit, core gross margin was 17.7% for the half and 17.3% in Q2 — consistent with Q1's 18.2% and with FY2025's 19.3%.

The second reading is far more internally coherent, and it is the one I have used in the table above. But it is an inference, not a disclosure, and it changes the core margin by five percentage points. Get the actual statement.

What survives either reading is the attribution. Equity-accounted JV income in an Indonesian contractor typically arrives close to net-of-tax at the consolidated level, because construction services are subject to final income tax levied on revenue rather than on profit — which is also why TOTL's net margin sits so close to its pre-tax margin. On that basis the JV line flows roughly 1:1 to the bottom line and the 96%-of-growth figure stands. If instead the JV profit is taxed at the consolidated rate, it contributes ~Rp79bn after tax, ex-JV net profit rose from Rp166.7bn to Rp190.6bn, and the growth is +14.3% — better, but still well under the 22.8% revenue growth. Neither version supports the headline "+54.6%" as an operating result.

Ask:

- The full income statement with both gross-profit subtotals, for 1H2026, 1H2025, FY2025 and FY2024, and where the JV line sits relative to tax.
- What the joint ventures actually are. TOTL has run KSO (kerja sama operasi) joint operations with Shimizu for a decade — Astra Tower and MNC Media Tower are the named precedents — and in 2015 KSO income was Rp62.3bn, 32.5% of net profit, before falling 55.5% the following half. This line has been large and violently cyclical before. Which projects drive it now, what stage are they at, and when do they complete?
- The JV balance-sheet position and its cash. Long-term investments rose from Rp207.08bn to Rp290.33bn in Q1 2026, including Rp20bn of fresh JV investment in the quarter. Equity income is not cash until distributed. How much has actually been remitted?
- Is any JV a Shimizu vehicle? If the 19.9% shareholder is also the JV partner, the split of project economics between the two is a related-party question, not just an accounting one.

Q2. Can data centres outrun the collapse in TOTL's traditional end markets?

This is the demand question, and the two halves of it are moving in opposite directions at speed.

The data-centre side is real and verifiable. PT STT GDC Indonesia became TOTL's largest customer at Rp654.2bn in FY2025 — up roughly 30x — and STT GDC's Indonesian build-out is only starting: STT Jakarta 2 (24MW, Bekasi) launched, Jakarta 3 topped out, Jakarta 5 and 6 groundbroken, on the way to a nine-building, 360MW campus. New contracts in 1H2026 were "dominated by data centre projects, hospitals, hospitality and office buildings." TOTL took its first data-centre job back in 2021 (Rp950bn) so this is not an opportunistic pivot; it is a five-year-old capability now hitting its market.

The core side is genuinely bad, and the numbers are not ambiguous:

Indonesian building demand, Q1 2026	Reading
Residential property sales, 18 cities	−25.7% YoY
Jakarta apartment project launches	Zero new launches
Jakarta CBD office stock	Unchanged at 5.08m sqm — developers view new offices as commercially unviable
Apartment oversupply pockets	Price corrections of up to 20% flagged

Offices, apartments, malls and hotels — TOTL's historic core — are where new work is not being started. So the composition of the order book is changing fundamentally, and the questions that follow are about concentration and margin, not about growth:

Sub-questions:

- Order intake is decelerating from a record. FY2025 new contracts were Rp6.87tn (135% of a Rp5tn target, and a 1.76x book-to-bill on Rp3.90tn of revenue). 1H2026 was Rp2.78tn against 1H2025's Rp2.49tn — up 11.6%, but the full-year target is Rp4–5tn, i.e. below 2025. Since 2H2025 alone produced Rp4.38tn, the shape of the year matters enormously. Is the Rp4–5tn target conservative in the way TOTL's targets usually are (see Q9), or is it a real signal?
- What is the actual order book? The company discloses new contract wins and a Rp17.7tn tender pipeline, but I could not obtain a carry-over backlog figure. Pipeline is not backlog. Ask for backlog at 30 June 2026 and its burn schedule.
- How concentrated is STT GDC now? It was 16.8% of FY2025 revenue after growing 30x. If data centres dominated 1H2026 intake, that share is rising. A single Singaporean customer funding a 360MW campus is a wonderful thing until its capex committee changes its mind.
- Are data-centre margins better or worse than the old core? Gross margin roughly doubled from ~12% (2020–21) to ~19% (2025) over exactly the period data centres scaled. If mix is the reason, the margin is durable while the campus builds. If it is something else, Q3 applies.
- Does the 10 new business classifications approved at the 3 November 2025 EGM — energy civil works, water infrastructure, ports, oil and gas, telecom hubs, chemical and pharmaceutical facilities — represent a genuine strategy or a licensing tidy-up? Management framed it as clarifying permitted scope. With Rp10bn of 2026 capex, it cannot be much more than that yet.

Q3. Is the doubling of gross margin structural, or is this the top of the cycle?

Gross margin went 11.9% (2020) → 12.1% (2021) → 17.8% (2024) → 19.3% (2025), and net margin went 4.0% (2022) → 10.6% (2025) → 13.1% (1H2026). For a building contractor that subcontracts execution, those are extraordinary numbers — Indonesian contractors have historically run mid-single-digit net margins. Three explanations fit, with very different valuations attached:

1. Mix. Data centres and industrial work carry better margins than commodity high-rise, and TOTL is selective about clients. Durable while the mix holds.
2. The JV line inflating the reported margin. See Q1 — part of the "margin expansion" may simply be equity income sitting inside a gross-profit subtotal. Not a margin at all.
3. Cycle. Scarcity of competent private-sector contractors in a market where the state contractors are financially impaired, letting TOTL price at will. Reverses when capacity returns or demand falls.

The most useful test available: FY2022 net margin was 4.0% on Rp2.28tn of revenue. That is the same company, the same model, four years ago. Something changed by a factor of 2.6x on the net line. Management has never had to explain it in public, because nobody asks — coverage is negligible.

Ask: gross margin by project type (data centre / hospital / hotel / office / industrial) for FY2024, FY2025 and 1H2026; the realised versus tendered margin on the largest three projects; and how much of the FY2025 gross profit is JV income under either presentation. Also ask what happened in 2022 — a 4.0% net margin year needs an explanation before you capitalise a 13.1% one.

Q4. What does the balance sheet actually say — and how much of the Rp1.09tn cash is really yours?

The bull case leans on "net cash, no debt." That is true and it is a genuine quality marker, but it is routinely overstated for contractors, and the numbers here need care.

- Total assets Rp4.04tn (+15.7%), total liabilities Rp2.71tn (+17.6%), equity Rp1.33tn (+12%) at Dec-2025. There is no bank or bond debt; the Rp2.71tn is trade payables, subcontractor obligations and customer advances.
- Current liabilities alone are Rp2.52tn. Cash of Rp1.09tn is 43% of current liabilities. A large part of that cash is project float — money owed to subcontractors and advances received from clients that has not yet been spent. It is not distributable, and treating it as excess cash in an EV calculation flatters the multiple materially.
- Retention receivables alone were Rp398.6bn at 31 March 2026 (Rp367.9bn at Dec-2025) — cash contractually withheld until defect periods expire, growing with the book.

The cash-conversion evidence that is available is reassuring but not spectacular. During calendar 2025 TOTL paid the FY2024 dividend of Rp255.75bn and cash still rose from Rp1.03tn to Rp1.09tn. So cash generated after capex was at least ~Rp315bn against Rp414.3bn of reported net profit — roughly 76% conversion. For a company whose profit increasingly comes from non-cash equity income, that gap is exactly what you would expect, and exactly what needs watching. The disclosed gross flows are consistent: 1H2026 receipts from customers Rp2,219.1bn against payments of Rp1,989.0bn, a Rp230.1bn gross spread against Rp269.8bn of reported profit.

Ask: the net operating cash flow line for FY2025 and 1H2026 (I could not obtain it — only the gross receipt and payment lines); customer advances / contract liabilities separately from trade payables, so the float can be sized; receivable and retention ageing; cash held inside joint ventures and unremitted; and the peak-to-trough working capital swing the model requires. On a 90.5% payout ratio there is no retained buffer — if working capital turns against the company in a downturn, the dividend is the shock absorber.

Q5. What has to be true for Rp3.94tn to be reasonable?

Reverse the valuation rather than forecasting into it. This is where TOTL differs from most things: the price does not require growth. It requires the current level not to be a peak.

At Rp1,155 the market cap is Rp3.94tn. Take the two honest bookends on cash:

Treatment	Enterprise value	Sustainable profit implied at 10x	As % of LTM Rp509.6bn
All Rp1.09tn cash is excess	Rp2.85tn	Rp285bn	56%
None of it is excess (all float)	Rp3.94tn	Rp394bn	77%

So on a 10x terminal multiple — defensible for a small-cap Indonesian contractor with a 33% ROE, no debt and a 9% yield, and roughly where the sector has historically traded — today's price implies sustainable net profit of Rp285–394bn. That is 56–77% of the last twelve months, and the upper end is roughly management's own FY2026 guidance of Rp350–400bn.

Read that plainly: the market is already pricing TOTL's earnings to fall back to guidance and stay there permanently, while paying you ~9.5% a year to wait. The bull case does not need the data-centre story to compound. It needs Rp414bn to be a floor rather than a ceiling.

Then check the arithmetic that makes it uncomfortable in the other direction:

> 1H2026 net profit was Rp269.8bn. In 2025, 1H was 42.1% of the full year. On identical seasonality FY2026 lands at ~Rp641bn (+55%). Management guides Rp350–400bn. Getting to guidance requires 2H2026 profit of Rp80–130bn — roughly a third to half of the first half.

One of those two numbers is wrong, and which one it is is the investment. If the seasonality holds, the stock is on ~6x FY2026 with a 9.5% yield. If management's guidance holds, 2H profit falls by more than half sequentially — which would only make sense if the JV income is a completion-recognition event that has now largely been taken. That is the single most important thing to establish, and it points straight back to Q1.

The question is not whether this is a good business — a debt-free contractor earning a 33% ROE on 496 employees plainly is. It is: are you buying Rp510bn of earnings at 7.7x, or Rp350bn of earnings at 11x with the difference sitting in a joint venture that has already peaked?

---

2. Second-order questions that still move the answer

Q6 — The float is the first-order risk nobody prices. Total Inti Persada 56.50% + Shimizu 19.90% + Djadjang Tanuwidjaja 10.88% + Pinarto Sutanto 1.83% = 89.11%, leaving a public float near 11% — about Rp430bn (~US$26m) at Rp1,155. Shimizu's tender offer took public holding from 31.73% to 11.83% in a single month in 2024. The consequences are concrete and cut both ways: a 9.5% dividend on a nearly-closed register can re-rate the stock violently on very little volume (the +9.47% day on 7 August is the evidence), and the same mechanics work in reverse. Any position has to be sized against the float, not the market cap. It also means TOTL will not enter major indices, will not attract institutional coverage, and cannot be exited quickly. Confirm the current register — the 89.11% figure is assembled from filings at different dates and Djadjang has been adding.

Q7 — Shimizu at 19.9%: strategic partner, patient acquirer, or neither? This is the most consequential open question about the shareholder register, and it is genuinely unresolved. Shimizu paid Rp580/share in September 2024 for 19.90%. The stock is now roughly 2.0x that price. The relationship long predates the equity stake — KSO joint operations on Astra Tower and MNC Media Tower go back to at least 2014 — so this is a partner who has audited TOTL's books from the inside for a decade and chose to buy 19.9% rather than 100%. 19.90% is a very deliberate number: just under the 20% threshold at which Indonesian rules and equity-accounting presumptions change, and just under the level that would ordinarily trigger a mandatory offer discussion. Two readings, and the disclosed facts do not discriminate: (a) a strategic supplier relationship — Shimizu gets a preferred Indonesian execution partner and board-level visibility; (b) a staged control acquisition awaiting the family's succession. Sharpening it: the May 2026 board slate contains no identifiable Shimizu representative. President Commissioner is Rusdy Daryono, an independent commissioner — genuinely good governance, and unusual — with the rest of the commissioner bench drawn from the family (Liliana Komajaya, Rudi S. Komajaya), plus Pinarto Sutanto, Wibowo, and independent commissioner Joseph Vittorio Pesik. The board of directors is Janti Komadjaja (President Director), Moeljati Soetrisno, Saleh, Lio Sudarto and Rasyid Daulay. A 19.9% holder with no board seat is either extremely passive or waiting. Ask which, and ask whether any standstill, right of first refusal or put/call arrangement exists over Total Inti Persada's 56.5%.

Q8 — The directors have been selling every month of 2026, into the rally. This is the clearest insider signal in the file and it runs one way:

Date	Seller	Shares	Price
19 May 2026	Saleh (Director)	620,000	Rp1,050
14 Jul 2026	Saleh	236,700	Rp1,050
30 Jul 2026	Saleh	578,800	Rp1,100
(undated)	Saleh	750,800	Rp1,160
5–6 Aug 2026	Moeljati Soetrisno (Director)	220,000	~Rp1,239 avg
post-dividend	Moeljati Soetrisno	90,900	(price garbled in source)

Stated reasons are "take profit" and "personal purposes," and the absolute sums are small — Moeljati still holds 2.35m shares. On a genuinely tight float, though, directors have been the marginal seller at every price from Rp1,050 to Rp1,239, in the same months the company was reporting +54.6% profit growth. Meanwhile Djadjang Tanuwidjaja, an outside individual, has been adding (8.81% → 9.94% → 10.88%). Both facts are information about what informed holders think, and they disagree with each other. Note also that a director bought 450,000 shares back in 2022, so this cohort does transact in both directions — the 2026 pattern is a change.

Q9 — Management systematically sandbags, and the base rate is large enough to matter. This is the mirror image of the usual problem, and it directly governs how to read the Rp350–400bn 2026 guidance:

Year	Guided	Actual	Outcome
2021	Revenue Rp1.5tn, profit Rp75bn	Rp1.745tn, Rp101.7bn	Beat +36%
2023	Revenue Rp2.3tn, profit Rp95bn	profit Rp172.7bn	Beat +82%
2024	New contracts Rp4.5tn	Rp5.08tn	113% of target
2025	Revenue Rp3.5tn, profit Rp255bn, contracts Rp5tn	Rp3.90tn, Rp414.3bn, Rp6.87tn	Beat +62% on profit, 137% on contracts
2026	Revenue Rp3.8–3.9tn, profit Rp350–400bn, contracts Rp4–5tn	1H: Rp2.06tn, Rp269.8bn, Rp2.78tn	?

Four consecutive years of guiding low and beating, the most recent by 62%. In 2020, the one year they guided down, they revised profit to a Rp50–175bn range and landed at Rp108.9bn — mid-range. So this is a management team that under-promises in good years and is honest in bad ones. That materially raises the probability that Rp350–400bn is a floor. But it does not resolve Q1: a sandbagged target and a JV-inflated first half are perfectly compatible, and would net out to something close to the guidance. Ask management directly whether the 2H2026 implied step-down is deliberate conservatism or an expectation about the JV line. The answer is worth more than any model.

Q10 — The legacy property subsidiary is the one place capital has been destroyed. PT Total Persada Development (TPD) was set up with Rp100bn to build the Ramada Sakala condotel in Tanjung Benoa, Bali and the GKM Green Tower office in TB Simatupang, Jakarta (US$25–30m). On 5 December 2024 TOTL converted Rp245.40bn of loans to TPD — outstanding since 2013 — into 245,400 new TPD shares, taking TPD's capital from Rp100bn to Rp345.4bn. The exchange sent a query letter on 23 December and TOTL responded on 27 December that the conversion was to "improve TPD's financial condition to support operational activities." Read plainly: a subsidiary borrowed Rp245bn from the parent, could not repay it for eleven years, and the debt was written into equity. That is a Rp245bn capital allocation failure — 59% of FY2025 net profit — in the one business TOTL entered that was not contracting. It was disclosed, it was handled cleanly, and it is now sunk. It matters for two reasons: it is the base rate for how TOTL performs outside its core, which is relevant to the 10 new business lines in Q2; and TPD holds 99% of PT Adhiguna Utama with the remaining 1% held by PT Total Inti Persada, the controlling shareholder — a related-party thread worth pulling. Ask what TPD's assets are now worth and whether any impairment remains to be taken.

Q11 — Where in the cycle is this? TOTL has shown you a full cycle and then something new. The 2018 peak was Rp208.7bn; the trough was Rp91.7bn in 2022; FY2025 at Rp414.3bn is double the previous all-time peak on 40% more revenue. That is not a cyclical recovery — on the face of it, it is a step change, and the step is the margin, not the volume. Which is precisely why Q1 and Q3 matter so much: if the margin step is real, the prior peak is irrelevant and this is a different company; if it is JV timing plus a contractor-scarcity window, then Rp414bn is a peak that will be compared to Rp208.7bn in a few years' time. Note the macro asymmetry — the reason TOTL can price well is partly that the state contractors are impaired and private developers are not launching anything. Both conditions are cyclical.

Q12 — Source quality and disclosure gaps. Primary filings were unreachable from this environment (see the Sources preamble), and Indonesian retail coverage is materially less reliable than the Chinese equivalent. Two examples encountered and discarded: an aggregator asserting FY2025 "revenue Rp2.5tn, net profit Rp1.4tn" (both wrong by wide margins, and internally impossible), and a "FY2023 revenue Rp3.09tn" that is identical to the confirmed FY2024 figure. Load-bearing figures I could not verify against a filing, which therefore become questions: which gross-profit subtotal the Rp364.63bn and Rp751.16bn figures refer to; net operating cash flow for any period; carry-over backlog; contract liabilities / customer advances; receivable ageing; the identity of the joint ventures; FY2023 revenue; the current shareholder register at one common date; and whether the Rp1.3tn March-2026 cash figure is right against the Rp1.09tn December print. Figures I regard as solid because two or more independent reports of the filings agree: revenue and net profit for 2018–2025 and 1H2026, gross profit for 2020/2021/2024/2025, the JV income series, new contract values, the dividend series, the Shimizu tender terms, share count, and the customer concentration figures.

---

3. What to watch next — falsifiable checkpoints

1. The 1H2026 full financial statements (filed 29 July 2026, not yet obtained here). The single highest-value document: it settles which gross-profit subtotal is which, gives net operating cash flow, contract liabilities, receivable and retention ageing, and — critically — the joint-venture note naming the ventures and their stage of completion. Everything in Q1, Q3 and Q4 turns on it.
2. Q3 2026 report, due late October. The first clean read on the 2H step-down. Cumulative 9M2026 profit above ~Rp380bn makes management's Rp350–400bn guidance obsolete and confirms sandbagging; below ~Rp330bn confirms that the 1H was a JV-timing event.
3. The joint-venture line in Q3. If it decays from Rp101.6bn toward the Rp10bn of 1H2025, Q1's pessimistic reading is right and 2026 lands near guidance. If it holds, the JV is a franchise and the earnings base is Rp600bn+. This one number resolves the memo.
4. Full-year 2026 new contract intake against the Rp4–5tn target. 1H was Rp2.78tn. 2H2025 alone was Rp4.38tn, so the comparison only becomes meaningful in January. Anything below Rp5tn is a genuine decline from Rp6.87tn and the first evidence that the core-market downturn is reaching the order book.
5. STT GDC's disclosed campus schedule — Jakarta 5 and 6 construction progress, and whether Jakarta 7–9 are awarded to TOTL. This is the growth engine and it is externally observable through STT GDC's own announcements, which is unusually convenient.
6. Jakarta office and apartment launch data each quarter. Zero new office and apartment launches is the current state. The quarter that changes is the quarter TOTL's traditional pipeline reopens — and the quarter its pricing power starts to normalise.
7. Further director sales, and Djadjang Tanuwidjaja's holding. The two have been moving in opposite directions all year. Watch which one stops.
8. Any change in Shimizu's 19.90%, or the appearance of a Shimizu nominee on the board. Either would be the most consequential single event available to this stock.
9. The FY2026 dividend declared around May 2027. On a 90.5% payout with no retained buffer, the dividend is the earnings signal. A cut would say more about working capital than any disclosure.
10. Any impairment or further capital injection at TPD, and whether the 10 new business classifications turn into actual spending beyond the Rp10bn 2026 capex budget.

---

4. Provisional read

The business is better than its sector by a wide margin and the quality markers are real, not cosmetic. Zero interest-bearing debt in an industry that destroys itself with leverage. Rp1.09tn of cash. A 33% ROE earned on 496 employees and Rp10bn of annual capex. No dependence on government payment cycles at a time when that is precisely what has crippled the state contractors. A five-year-old data-centre capability arriving exactly as Indonesia becomes a regional data-centre build-out site, with a customer whose committed campus is 360MW. Four consecutive years of beating its own guidance, the last by 62%. A ~9.5% dividend yield paid out of earnings that have quadrupled since 2022. On the surface this is a very good small company at 7.7x earnings.

The stock is a harder question, and the difficulty is concentrated in one place. 96% of the last half-year's profit growth came from an equity-accounted joint-venture line that has, on the company's own history, been this large before and then fallen 55% in a single half. Strip it out and the construction business grew its bottom line 2.3% on 22.8% more revenue. That is not disqualifying — the JV projects are real projects and the income is real income — but it means the headline "+54.6%" is not an operating result, and it means the Rp510bn LTM figure that makes the stock look cheap may not be the right denominator. Management's own guidance of Rp350–400bn implies a 2H profit of Rp80–130bn against a Rp269.8bn first half. Either they are sandbagging again, or they know something about the JV line. Those are not the same investment.

Two structural facts tilt the risk without settling it. The core end markets are in a documented contraction — apartment sales −25.7%, zero new Jakarta office or apartment launches, oversupply corrections of up to 20% flagged — so the data-centre pivot is not incremental growth, it is replacement, and concentration in a single Singaporean customer is the price of it. And the float is ~11%. On Rp430bn of tradeable stock, a 9.5% yield can re-rate the shares on trivial volume in either direction, which is what the +9.47% day on 7 August looked like. This is a position that has to be sized against the float, not the market cap, and entered with the assumption that it cannot be exited quickly.

Governance is unusually clean for a family-controlled Indonesian small cap, and that deserves saying plainly: an independent commissioner serves as President Commissioner, the TPD debt conversion was disclosed and explained on the exchange's query within four days, and the dividend policy is generous and consistent. The two live threads are the Rp245bn eleven-year loan to a property subsidiary that had to be converted to equity — the base rate for TOTL outside contracting, relevant now that ten new business lines have been approved — and the 19.9% shareholder with no board seat, whose intentions are the largest unpriced variable in the name.

The honest framing: a genuinely high-quality, debt-free, cash-generative contractor, at a price that already assumes its earnings fall by a quarter to a half and stay there — where the single thing you cannot verify from public sources is whether that assumption is correct. What would flip the conclusion is narrow and specific: the joint-venture note in the 1H2026 statements, showing which projects generate the Rp101.59bn and at what stage of completion. If the JV income is recurring across a portfolio of live projects, the stock is on ~6x FY2026 earnings with a 9.5% yield and a 360MW customer pipeline, and the market has simply not looked. If it is a completion-recognition event on one or two jobs now finishing, fair value is management's guidance capitalised at 10x — roughly where the shares already trade — and there is no margin of safety in a name you cannot sell.

Get the 1H2026 financial statements before doing anything else. They were filed on 29 July and they contain the answer. Second priority is a call with management on exactly two topics: what the joint ventures are, and why 2H2026 guidance implies a halving. At 7.7x with a 9.5% yield the downside on a JV disappointment is a de-rating to fair rather than a permanent loss — but on an 11% float, a de-rating is not something you trade out of.

Sources

Primary filings were unreachable from this environment: cninfo-equivalents idx.co.id, the company's own totalbp.com investor pages, indopremier, idnfinancials, kontan, bareksa, stockbit, investing.com, stockanalysis and Yahoo Finance are all blocked by the network egress proxy. Every figure below comes from search-surfaced coverage of those filings, or from search-engine extraction of the filing PDFs themselves where noted, and must be re-verified against the audited statements and the exchange disclosures before it enters a model. Where two sources conflict, both are reported in the memo.

Results and financials

- FY2025: revenue Rp3.90tn +26.35%, net profit to parent Rp414.30bn +56.09% (Rp121.50/share), gross profit Rp751.16bn +37.34%, construction services Rp3.88tn = 99.56% (IDX Channel / Berita Moneter)
- FY2025 balance sheet: total assets Rp4.04tn +15.7%, liabilities Rp2.71tn +17.6% (current Rp2.52tn), equity Rp1.33tn +12%, cash Rp1.09tn vs Rp1.03tn (Readers.id)
- FY2025 growth detail and Rp3.9tn revenue confirmation (Neraca) · same (Receh.in)
- 9M2025: revenue Rp2.79tn +25.5%, gross profit Rp553.4bn +47.8%, net profit Rp295.4bn +63.8%; data-centre projects named as the driver (Konstruksi Media)
- Q1 2026: revenue Rp837.71bn −1.14%, JV project profit Rp62.88bn vs Rp2.0bn, gross profit after JV profit Rp215.68bn, net profit Rp104.10bn +37.4%; long-term investments Rp207.08bn → Rp290.33bn incl. Rp20bn fresh JV investment; cash Rp1.3tn at 31 Mar 2026, no interest-bearing debt (Bareksa)
- 1H2026: revenue Rp2.06tn +22.8%, gross profit Rp364.63bn, JV project profit Rp101.59bn +914.88% vs Rp10.01bn, net profit Rp269.81bn +54.6% vs Rp174.51bn (Stockwatch)
- 1H2026 revenue +22.75% to Rp2.05tn, net profit +54.60%; 2H focus on efficiency and operational optimisation (Kontan)
- Q1 2026 retention receivables Rp398.60bn (31 Mar 2026) vs Rp367.88bn (31 Dec 2025); 9M2025 cash receipts from customers Rp2,850.30bn vs payments Rp2,302.38bn; 1H2026 receipts Rp2,219.08bn vs payments Rp1,988.98bn — extracted from the filing PDFs at idx.co.id and totalbp.com, which could not be opened directly
- FY2018 Rp2.78tn / Rp208.67bn and FY2019 Rp2.47tn −15.11% / Rp175.73bn −15.78% (Kontan) · two straight years of decline (Bisnis)
- FY2020 net profit Rp108.87bn; FY2021 Rp101.68bn −6.4% (Medcom) · FY2020 revenue Rp2.293tn / gross profit Rp273.07bn and FY2021 Rp1.745tn / Rp211.45bn (audited FY2021 report)
- FY2022 revenue Rp2.28tn, net profit Rp91.68bn; 2023 target Rp2.3tn / Rp95bn (Kontan)
- FY2023 net profit Rp172.7bn vs Rp91.7bn in 2022; 9M2023 net profit Rp109.58bn +66.29% on revenue Rp2.07tn +19.23% (Bisnis)
- FY2024 revenue Rp3.08tn, net profit Rp265.42bn (Rp77.84/share), gross profit Rp546.92bn — as restated in FY2025 comparatives

Order intake, customers and the data-centre pivot

- FY2025 new contracts Rp6.87tn = 135% of the Rp5tn target, dominated by schools, hotels, offices, utilities and industrial (Konstruksi Media)
- FY2024 new contracts Rp5.08tn = 113% of a Rp4.5tn target (Kontan)
- 1H2026 new contracts Rp2.78tn, dominated by data centres, hospitals, hospitality and offices; tender pipeline Rp17.7tn; FY2026 targets revenue Rp3.90tn and net profit Rp400bn (Kontan)
- New contracts Rp2.6tn to end-May 2026, from data centres, hotels and other buildings (Kontan)
- 1H2025 new contracts Rp2.49tn, dominated by data centre, industrial and hotel work (Bisnis)
- Customer concentration: PT STT GDC Indonesia Rp654.2bn (up ~30x), PT Pembangunan Property Nusantara Rp218.5bn, PT Batamindo Investasi Cakrawala Rp86.4bn; ~496 employees (Konstruksi Media / Investing.com profile)
- STT GDC Indonesia: STT Jakarta 2 (24MW, Bekasi) launched, Jakarta 3 topped out, Jakarta 5 and 6 groundbroken; nine-building 360MW campus planned (IDNFinancials) · STT Jakarta 2 build (Bisnis Teknologi)
- First data-centre contract, Rp950bn, September 2021 (Bisnis)
- No dependence on government projects — profit growth from private work (Kontan Insight)

Joint ventures / KSO

- Historic KSO precedent: Rp62.3bn of KSO income in 2015 = 32.5% of net profit, falling 55.5% to Rp16.9bn (14.5% of net profit) in 1H2016; KSOs with Shimizu on Astra Tower and MNC Media Tower (Kontan) · exploring JVs with foreign contractors (Kontan)
- TOTL and Shimizu joint arrangement, March 2014 (company-hosted Kontan clipping)

Guidance history and targets

- FY2025 targets: revenue Rp3.5tn, net profit Rp255–268bn (MarketNews)
- FY2026 targets: revenue ~Rp3.8tn, net profit ~Rp350bn, new contracts Rp5tn; 2026 capex ~Rp10bn for project equipment and IT (Pintar Saham / RCTI+)
- FY2026 targets stated as new contracts Rp4tn and net profit Rp400bn (StockWatch)
- 2020 downgrade: revenue target Rp2.3tn → Rp1–2.3tn, profit Rp175bn → Rp50–175bn; 1H2020 new contracts −43% to Rp408bn (Bisnis)
- 2021 targets: revenue Rp1.5tn, profit Rp75bn (Kontan)
- 2025 target of Rp5tn new contracts (Kontan via TradingView)

Ownership, governance and corporate actions

- Shimizu Corporation tender offer: 678,592,000 shares = 19.90% at Rp580, total Rp393.58bn, offer period 26 Aug – 24 Sep 2024; public holding falls from 31.73% to 11.83% (Kontan Insight) · tender price set on the 90-day high average, 18 Apr – 16 Jul 2024 (Media Asuransi) · Rp580 tender detail (Stockbit Snips)
- Pre-tender register at 30 June 2024: PT Total Inti Persada 56.5%, public 31.73%, Djadjang Tanuwidjaja 9.94%, Pinarto Sutanto 1.83%; Low Tuck Kwong in the top-20 register for a decade (Bisnis)
- Djadjang Tanuwidjaja at 371,160,140 shares = 10.88% as of 13 Aug 2025 (SWA)
- May 2026 RUPST: dividend Rp110/share = Rp375.1bn (90.49% of Rp414.51bn), paid by 5 June 2026; board and commissioners appointed to 2030 — Janti Komadjaja President Director, Rusdy Daryono President Commissioner and Independent Commissioner (IDX Channel) · dividend schedule and 8.87% yield at Rp1,240 on 8 May 2026 (Pintar Saham) · IDX dividend disclosure letter, 8 May 2026
- EGM 3 November 2025: Article 3 amended to add 10 new business classifications (telecom hubs, water resources, non-fishery ports, oil and gas civil works, chemical and pharmaceutical facilities and others); quorum 76.92%, approved unanimously (Investor.id)
- TPD debt-to-equity conversion: Rp245.40bn of loans outstanding since 2013 converted into 245,400 new PT Total Persada Development shares on 5 Dec 2024, raising TPD capital from Rp100bn to Rp345.4bn; exchange query 23 Dec, company response 27 Dec 2024 (Kontan) · company rationale (EmitenNews)
- TPD background: Rp100bn capital for Ramada Sakala condotel (Tanjung Benoa, Bali) and GKM Green Tower (TB Simatupang, US$25–30m) (Kontan) · TPD holds 99% of PT Adhiguna Utama, 1% held by PT Total Inti Persada (Bisnis)

- FY2024 dividend Rp75/share = Rp255.75bn = 96.3% payout (Lotus Sekuritas) · FY2023 dividend Rp40/share (Bisnis)
- Company profile: founded 1970, Jakarta Barat; Construction and Rental & Others segments (Investing.com profile) · history and register (Britama)

Insider transactions

- Moeljati Soetrisno (Director) sold 220,000 shares on 5–6 Aug 2026 in four trades for Rp272.50m, stated purpose take-profit; holding now 2.35m shares (Liputan6)
- Saleh (Director) sold 236,700 shares at Rp1,050 on 14 Jul 2026 (Pasardana) · 620,000 at Rp1,050 on 19 May 2026 (Pasardana) · 578,800 at Rp1,100 on 30 Jul 2026 (~Rp636.68m) (BizBuz) · 750,800 at Rp1,160 (FAC Sekuritas)
- Contrast: a director bought 450,000 shares in 2022 (Katadata)

Market data, peers and industry

- Share price Rp1,155, market cap ~Rp3.55–3.89tn, PER 12.76 on trailing FY2024, dividend yield 7.04% / FY2025 10.84% at a lower price, payout 90.54% (Cermati Invest) · Rp1,330 close on 7 Aug 2026, +9.47% (Pasardana)
- Zero interest-bearing debt, no bank or bond borrowings, consistent positive cash flow, assets growing without debt (BigAlpha)
- Peer set for private-sector building contractors — ACST, NRCA, PBSA, TOTL versus SOEs PTPP and WIKA; TOTL characterised as the most conservative and "healthiest," avoiding bank debt and selective on clients (Stockbit Snips construction sector list)
- Indonesian building demand Q1 2026: residential sales −25.7% YoY across 18 cities (Indonesia Investments) · no new Jakarta apartment launches; developers cautious (Real Estate Asia) · Jakarta CBD office stock unchanged at 5.08m sqm; new offices commercially unviable (Real Estate Asia) · apartment oversupply corrections up to 20% (Bamboo Routes)
- Indonesian construction market USD329.4bn in 2026 → USD436.9bn by 2031 (5.81% CAGR); commercial the fastest segment at 6.48% driven by digital infrastructure; Java 63.11% of the market (Mordor Intelligence) · affordable housing, Batam data centres and 69GW of power as the 2026–30 drivers (GlobeNewswire)
- Foreign data-centre investment pipeline in Indonesia, including a UAE-backed Rp37tn project (Katadata)
